

Nuclear Uniform Curriculum Program

Bismarck State College is one of the few schools participating in the program. Successful completion will prepare students for the safety-oriented, high-tech world of nuclear energy.

TAKE THE PATHWAY TO NUCLEAR ENERGY EMPLOYMENT

The Nuclear Uniform Curriculum Program (NUCP) is an industry-led partnership with educational institutions that gives students a complete knowledge base with a standardized and transportable training program **making them eligible for employment in the nuclear industry nationwide.**

Nuclear professionals are trained under the NUCP at 38 community colleges in a cohesive manner to ensure consistency under the overarching guiding principle of safety above all else. **A career in the nuclear means a well-paying job with salaries significantly above the national average.**

But even more it offers the opportunity to do well by doing good. How? NUCP graduates embark upon a career with opportunities for advancement in an industry that produces 20 percent of America's electricity in a cost efficient and reliable manner without emitting gases. **It's a win-win: good for you and good for the environment.**
