HANDS-ON LEARNING **WORKFORCE READY.**

Build the network that powers today's technology.

With Bismarck State College's Computer Networking Certificate, you'll develop the technical skills needed to install, configure, manage and troubleshoot computer networks and operating systems. You'll gain hands-on experience with networking fundamentals, Microsoft Windows client and server environments, Linux system administration and network infrastructure while preparing for careers in information technology.

Designed with flexible online and on-campus options, this certificate allows you to build in-demand networking skills on your schedule. Whether you're launching a career in IT or expanding your technical expertise, you'll graduate with the knowledge employers are looking for.

Build the network that powers today's technology.

The Computer Networking Certificate is designed to help you advance your education and career. Stack your certificate into an associate degree or bachelor's degree and expand your technical expertise with additional hands-on cybersecurity certificates that build specialized, in-demand skills.
