- Research
- Psychometrics (Testing)
- Corrections
- Education
- Industry
- Human Resources
- Vocational Rehabilitation
- Business/Marketing
- Health/Fitness
- Sales

## HANDS-ON LEARNING WORKFORCE READY.

### Explore the science behind human behavior

Earn a two-year associate degree in Psychology from Bismarck State College. Gain an understanding of psychological principles and how they apply to everyday life, human behavior under stress, and the foundational skills needed for careers in human services or professional psychology. Whether you plan to continue your education or enter the workforce, this program helps you better understand people and human behavior.

The psychology program at BSC provides the first two years of coursework toward a bachelor's degree in a psychology-related field while building a strong foundation in general education and introductory psychology. Upon finishing the program, you will earn either an Associate in Science or Associate in Arts degree.

### PREPARING FOR SUCCESS IN YOUR DEGREE

If you're interested in studying psychology, you should have a strong interest in human behavior and how people think, feel, and respond to the world around them. Helpful high school preparation includes psychology and other social science courses, math courses that prepare you for college algebra and statistics, and strong writing skills.

To advance in the psychology field, you should plan to pursue an advanced degree.
