A Temporary Internet Files folder on every computer contains a list of web pages and other related items previously visited. These files that are stored on a computer can make browsing the web faster, until it gets too large. Clearing cache can significantly improve the speed and performance of a browser and allow the browser to load the most up-to-date page.

1. From Internet Explorer Menu Bar
   Click on Tools, Internet Options:

2. On the "General Tab", click on
   ![Delete button](image)

3. Click Delete

4. Click ![OK button](image)
